

WHAT'S YOUR NUMBER?

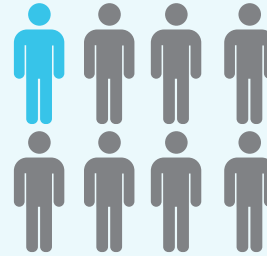

Prostate Cancer Info Sheet

September is
Prostate Cancer
Awareness Month

Men 45+ should understand their PSA Number!

- Most men without prostate cancer have PSA levels under 4 ng/mL of blood.
- Men with a PSA level between 4 and 10 (often called the "borderline range") have about a 1 in 4 chance of having prostate cancer.
- Elevated levels could signal prostate cancer or a different prostate-related condition – enlarged prostate (benign prostatic hyperplasia or BPH), inflammation of the prostate (prostatitis), a urinary tract infection or even natural aging process.

1 *in* **8**

men will be diagnosed with prostate cancer in their lifetime.

EVERY 2 MINUTES

a new case of prostate cancer occurs.

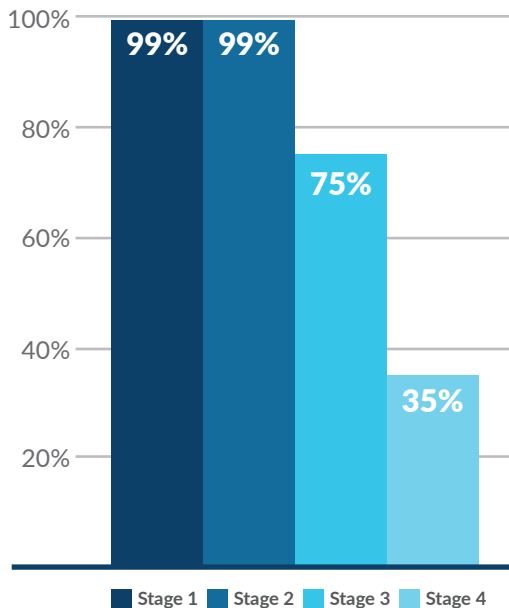

FAMILY HISTORY

Having a father or brother with *prostate cancer* more than doubles the risk of developing this disease.

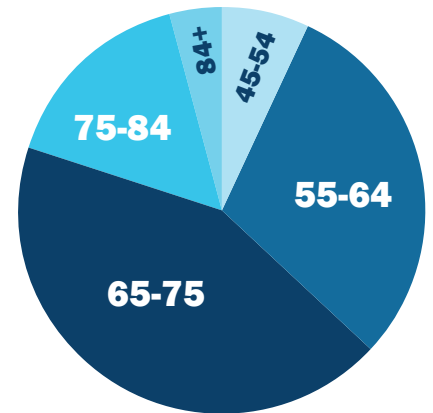

313,780 NEW CASES

of prostate cancer are estimated to be diagnosed this year in the US.

5-YEAR SURVIVAL RATES BY STAGES

According to American Cancer Society, the five-year survival rate for both localized cancer (that has not spread beyond the prostate) and regional cancer (that has not spread beyond nearby structures and lymph nodes) is nearly 100%.

Percent of new cases
BY AGE GROUP

45-54	7%
55-64	30%
65-74	43%
75-84	16%
84+	4%
